

JAVA IF STATEMENTS

BASIC IF STATEMENT

```
class IfStatement {  
    public static void main(String[] args) {  
        int number = 10;  
        // checks if number is less than 0  
        if (number < 0) {  
            System.out.println("The number is negative.");  
        }  
        System.out.println("Statement outside if block");  
    }  
}
```

IF WITH STRING

```
class Main {  
    public static void main(String[] args) {  
        // create a string variable  
        String language = "Java";  
        // if statement  
        if (language == "Java") {  
            System.out.println("Best Programming Language");  
        }  
    }  
}
```

JAVA IF STATEMENTS

How the if...else statement works?

```
class Main {
    public static void main(String[] args) {
        int number = 10;
        // checks if number is greater than 0
        if (number > 0) {
            System.out.println("The number is positive.");
        }
        // execute this block
        // if number is not greater than 0
        else {
            System.out.println("The number is not positive.");
        }
        System.out.println("Statement outside if...else block");
    }
}
```

JAVA IF STATEMENTS

How the if...else...if ladder works?

```
class Main {  
    public static void main(String[] args) {  
        int number = 0;  
        // checks if number is greater than 0  
        if (number > 0) {  
            System.out.println("The number is positive.");  
        }  
        // checks if number is less than 0  
        else if (number < 0) {  
            System.out.println("The number is negative.");  
        }  
        // if both condition is false  
        else {  
            System.out.println("The number is 0.");  
        }  
    }  
}
```

JAVA IF STATEMENTS

In Java, It's called the nested `if...else` statement.

```
class Main {  
  
    public static void main(String[] args) {  
  
        Double n1 = -1.0, n2 = 4.5, n3 = -5.3, largest;  
  
        if (n1 >= n2) {  
  
            // if...else statement inside the if block  
  
            // checks if n1 is greater than or equal to n3  
  
            if (n1 >= n3) {  
  
                largest = n1;  
  
            }  
  
            else {  
  
                largest = n3;  
  
            }  
  
        } else {  
  
            // if..else statement inside else block  
  
            // checks if n2 is greater than or equal to n3  
  
            if (n2 >= n3) {  
  
                largest = n2;  
  
            }  
  
            else {  
  
                largest = n3;  
  
            }  
  
        }  
  
        System.out.println("Largest Number: " + largest);  
  
    }  
  
}
```

JAVA IF STATEMENTS
